Implant Prosthodontics

Part 1)  

Part 2)  
Prosthetic and surgical management of malpositioned implant for single restoration in the esthetic zone.

Part 3)  
Ortho-Perio-Prosth

Synopsis:  
The Part 1 lecture will present a decision tree to treat the edentulous maxilla, either for fixed or removable implant supported prostheses. It will help clinicians identify the final prosthetic design and will provide a case specific risk assessment guide. A specific attention will be placed on implants number and distribution, material selection, treatment plan sequence and inter-disciplinary communication.

The Part 2 lecture will describe a systematic approach to assess biologic, prosthetic and esthetic complications related to poorly placed implants in the esthetic zone. Through step by step documented clinical situations, the presentation will help clinicians to make an accurate diagnosis and subsequently guide them to make the decision to keep or remove the implant. Treatments addressing both case scenarios
will be presented. A specific attention will be placed on the coordination of the prosthetic and surgical steps.

Part 3 Ortho Perio Prostho considerations

**Biography**

Dr. Adrien Pollini obtained his DDS from Claude Bernard University in Lyon, France, in 2009. Subsequently, he completed a 3 years Advanced Program in Oral Implantology. He was an ITI Scholar in 2012/2013 at the University of Louisville and completed a 3 year post-graduate program in Prosthodontics from 2014 to 2017 at the same University. He is a ITI Fellow and an Assistant Professor at Laval University, Quebec since 2015.
